

Junttan Hydraulic Piling Hammers

Junttan hammers are suitable for driving steel tube pipes, sheet piles, precast concrete and timber piles. The stroke and blow rates are adjustable to optimize the pile driving performance in all conditions. The ram weight can also be changed according to pile type requirements.

Junttan hydraulic hammers are friendlier to the environment and more practical than conventional diesel and air hammers, as they generate less noise, vibration and emissions. Biodegradable oils can also be used in the hydraulic system.

Key Features of Junttan Hydraulic Piling Hammers

- Adjustable energy
- Excellent performance and effective energy transfer
- Suitable for different kinds of leaders, hydraulic systems and all pile types
- Proven reliability
- Easy operation and maintenance
- Environmental friendly
